The Honorable Spencer Abraham
Secretary
U.S. Department of Energy
1000 Independence Avenue, S.W.
Washington, D.C. 20585

2001-014228 Jun 12 p 3:11

Dear Secretary Abraham:

I am writing to confirm the invitation for you to testify before the Subcommittee on Energy and Air Quality on Wednesday, June 13, 2001, at 10:00 a.m. in 2123 Rayburn House Office Building. The hearing will focus on the National Energy Policy report of the National Energy Policy Development Group. This is one in a series of hearings on national energy policy.

According to the Energy Information Administration, over the next 20 years, growth in U.S. energy consumption will increasingly outpace energy production, if production continues to grow at the rate of the last 10 years. In May of this year, the Vice President submitted to the President a National Energy Policy report on the causes of, and ways to meet, our Nation's increasing demand for energy. The report identified five goals: modernize conservation, modernize energy infrastructure, increase energy supplies, accelerate environmental protection and improvement, and increase our Nation's energy security. The report recommended numerous regulatory and legislative reforms necessary to meet those goals.

Your testimony should address the Administration's recent proposal of a comprehensive National energy strategy to meet our Nation's increasing energy needs. Your testimony should focus on the Federal government's role in increasing energy supplies and reducing demand, and identify statutory or regulatory provisions which should be reformed concerning these issues. In addition, as Secretary of Energy, your testimony should identify specific actions being undertaken at the Department of Energy to implement the recommendations of the National Energy Policy report.

Following are important details concerning the preparation and presentation of your testimony.

The Form of Your Testimony. You are requested to submit a written statement which may be of any reasonable length and may contain supplemental materials; however, please be aware that the Committee cannot guarantee that supplemental material will be included in the printed hearing record. Your written statement should be typed, double spaced, and should include a one-page summary of the major points you wish to make. You will have an opportunity to present an oral summary of your testimony to the Subcommittee; to ensure sufficient time for Members to ask questions, your oral presentation should be limited to five minutes.

28262

Pursuant to Rule 4(b)(1) of the Rules of the Energy and Commerce Committee (a copy of which is enclosed), I am requesting you to provide 75 copies of your written statement at least two working days in advance of your appearance. This will allow Members and staff the opportunity to review your testimony. On the day of the hearing, please bring an additional 75 copies of your testimony to satisfy the anticipated public interest in this hearing.

Rule 4(b)(1) of the Committee Rules also requires that, if you have the technological capability, you should also submit a copy of your testimony in electronic format, *i.e.*, on a computer disk. The Committee will post your testimony to the Committee Website ("<http://www.house.gov/commerce/welcome.html>") after the hearing. This will increase public access to your testimony and reduce the Committee's printing costs. Please be aware that submission of your testimony in electronic form does not relieve you of the obligation to submit the requested number of printed copies of your testimony. Additional guidelines for submission of testimony in electronic format are enclosed.

Please send the electronic and printed copies of your testimony required two working days before the hearing to the attention of the Legislative Clerk for the Committee on Energy and Commerce in 2125 Rayburn House Office Building, Washington, D.C. 20515.

Publication of the Hearing Record. Rule XI, clause 2(e)(1)(A) of the Rules of the House requires the Committee to keep a written record of committee hearings which is a substantially verbatim account of remarks made during the proceedings, subject only to technical, grammatical, and typographical corrections. Your testimony, the transcript of the hearing, and any other material that the Subcommittee agrees to include in the hearing record (subject to space limitations) will be printed as a record of the hearing. You will receive a copy of the printed hearing record when it becomes available, usually 30 to 60 days after the date of the hearing.

If you have any questions concerning any aspect of your testimony, please contact Jason Bentley of the Energy and Commerce Committee staff at (202) 226-2424.

Sincerely,

Joe Barton
Chairman
Subcommittee on Energy and Air Quality

Enclosures: (1) Electronic Format Guidelines

28263

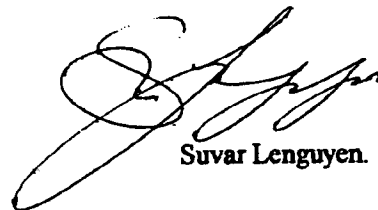

Dear Spencer Abraham,

I am a seventeen-year-old young future voter. I am also from the wonderful state of California, and I am fully aware that you realize that we are in a major power crisis. I realize that you are trying to all that can be done to help and that you must find cheaper and safer solutions to this ever growing problem, but I beg to differ. Safety and cutting down on pollution is, in my opinion, is the least of our problems for the moment. If we do not solve this problem now I am afraid that this beautiful state will be visible only in the sunlight. Some plans that you and your administration might consider could be:

- Continue plans on more drilling.
- More investments in solar, wind, and other renewable energy technologies to bring them to market faster.
- Fix, clean, and upgrade the already existing power plants, instead of building new ones to reduce the cost of construction.
- Increased production from the existing oil and gas fields, including research on the best way to transport natural gas from existing drilling sites in Alaska's Prudhoe Bay.
- Invest in coal-burning and maybe even nuclear power plants.

I realize that I may be too young to know what is going on but I know for a fact that we are in trouble and that this problem will not go away without sacrifices, so please take some of my advise seriously so that we can take care of this problem quickly.

Sincerely,

Suvar Lenguyen.

STENOGRAPHIC MINUTES

Unrevised and Unedited

Not for Quotation or

Duplication

HEARING ON THE PRESIDENT'S NATIONAL ENERGY POLICY:

CLEAN COAL TECHNOLOGY AND OIL AND GAS R&D

Tuesday, June 12, 2001

House of Representatives,

Subcommittee on Energy

Committee on Science

Washington, D.C.

Committee Hearings

of the

U.S. HOUSE OF REPRESENTATIVES

OFFICE OF THE CLERK
Office of Official Reporters

28266

1 YORK STENOGRAPHIC SERVICES, INC.

2 HEARING ON THE PRESIDENT'S NATIONAL ENERGY POLICY:

3 CLEAN COAL TECHNOLOGY AND OIL AND GAS R&D

4 Tuesday, June 12, 2001

5 House of Representatives,

6 Subcommittee on Energy

7 Committee on Science

8 Washington, D.C.

9 The Subcommittee met, pursuant to call, at 10:05 a.m., in
10 Room 2318 of the Rayburn House Office Building, Hon. Roscoe
11 G. Bartlett [Chairman of the Subcommittee] presiding.

28267

12 Chairman BARTLETT. Let me call our Subcommittee hearing
13 to order. Is Ms. Abend in the room? We are anticipating a
14 fifth witness and hoping that she was in the room. Today we
15 will hear from two Panels of witnesses who will discuss how
16 we may potentially use clean coal technologies and petroleum
17 and natural gas research and development to help meet our
18 increasing demand for energy. Fossil fuel provides over 80
19 percent of the energy consumed in this country today and is
20 likely to increase in significance as our growing population
21 and economy produce ever greater demands on these ultimately
22 finite energy resources.

23 This hearing is part of a House-wide effort and, in fact,
24 a Hill-wide effort to consider the President's National
25 Energy Policy. Vice President Cheney chaired the NEP,
26 National Energy Policy task force, and I believe he did a
27 very creditable job. It is our job in Congress to dissect the
28 report, provide a critical review of his findings, and
29 suggest approaches to implement its provisions where
30 appropriate. The Energy Subcommittee of the House Science
31 Committee has jurisdiction over all nondefense energy
32 research and development and we take this responsibility very
33 seriously.

34 In previous hearings before this Subcommittee, we heard
35 testimony about the accelerating consumption of our finite
36 fossil energy reserves and the environmental effects stemming

37 | from their use. We have also considered testimony about the
38 | potential for renewable energy and whether nuclear power can
39 | help fill the gap. I am convinced that we must immediately
40 | adopt conservation and energy efficiency measures to help
41 | extend the lifetime of fossil resources and reduce emissions.
42 | We must also rapidly phase in renewable forms of energy.

43 | Yet, even with the transition to alternative energy
44 | sources, fossil fuels will continue to be an essential part
45 | of our energy mix for the next 20 or 30 years and perhaps
46 | beyond. The correlation between economic prosperity and
47 | readily available energy is well documented. We use more
48 | energy than ever before, but our way of life has become less
49 | energy intensive. Technology, innovation, efficiency, and
50 | conservation have brought us to the point where we can be
51 | more productive with the energy we use. This is certainly an
52 | excellent trend.

53 | Unfortunately, we are also reaching a point where the
54 | easy and inexpensive fossil fuels are being consumed and we
55 | will have to transition towards more difficult-to-extract and
56 | costly fossil fuels. We Americans are also demanding cleaner
57 | air, so some sources of fossil fuels, such as coal, that are
58 | abundant and cheap, are shunned in favor of cleaner burning
59 | natural gas, which, though currently abundant, is also finite
60 | and increasingly costly.

61 | The question before us today is, can technology derived

28269

62 | from R&D efforts in the government, private sector, and in
63 | our universities assist us in producing more energy more
64 | efficiently and in a way that comports with the needs of
65 | public and worker health and safety and the health of our
66 | environment?

67 | Our first Panel will consider all aspects of clean coal
68 | power technology, including how the President's proposed 2
69 | billion in spending on clean coal technologies may both
70 | increase efficiency and reduce emissions from utilities and
71 | find innovative new uses for coal and coal bed methane.

72 | Our witnesses will be Robert S. Kripowicz, Acting
73 | Assistant Secretary for Fossil Energy at the U.S. Department
74 | of Energy. Mr. Kripowicz will also appear on Panel II. Bob
75 | Yamagata, Executive Director of the Coal Utilization Research
76 | Council; James E. Wells, Director of Natural Resources and
77 | Environment at the U.S. General Accounting Office; Katherine
78 | Abend, hopefully, Global Warming Associate at the U.S. Public
79 | Interest Research Group, U.S. PIRG; and John S. Mead,
80 | Director of the Coal Research Center at Southern Illinois
81 | University, Carbondale. I understand that my colleague, Mr.
82 | Costello, will be introducing his constituent, Mr. Mead,
83 | formally at the conclusion of my remarks.

84 | The second Panel will consider how technologies derived
85 | from petroleum and gas R&D can be employed to improve
86 | exploration, extraction, refining, and processing, and

28270

87 transportation of these fossil fuels. Our witnesses will
88 include Virginia Lazenby, Chairman and CEO of Bretagne, GP,
89 Nashville, Tennessee, on behalf of the Independent Petroleum
90 Association of America; Paul Cuneo, Vice President and Chief
91 Information Officer of Equiva Services, LLC, Houston, Texas,
92 on behalf of the American Petroleum Institute; Dr. Craig W.
93 Van Kirk, Professor of Petroleum Engineering and Head of the
94 Department of Petroleum Engineering at the Colorado School of
95 Mines, Golden, Colorado; and Dr. Alan Huffman, Manager of
96 Conoco's Seismic Imaging Technology Center, Houston, Texas.
97 I look forward to hearing today's testimony and pursuing
98 these subjects in greater detail. Before we get started,
99 however, I would like to remind the members of the
100 Subcommittee and our witnesses that this hearing is being
101 broadcast live on the Internet, so please keep that in mind
102 during today's proceedings. I would also like to ask for
103 unanimous consent that all members who wish may have their
104 opening statements entered into the record. Without
105 objection, so ordered. I now turn to my distinguished
106 colleague, Mr. Costello, for an introduction and his opening
107 remarks.

108 [Statement of Mr. Bartlett follows:]

109 ***** INSERT 1 *****

2827F

110 Mr. COSTELLO. Well, Mr. Chairman, thank you very much,
111 and I thank you for calling this hearing today. I will submit
112 my statement, my formal statement, for the record. I welcome
113 all of our witnesses here today and I look forward to hearing
114 their testimony.

115 In particular, I welcome a constituent and friend, John
116 Mead, who is a part of the first Panel. Mr. Mead is the
117 Director of the Coal Research Center at Southern Illinois
118 University in Carbondale. In fact, I recently attended just a
119 few weeks ago a forum on clean coal technology and the future
120 of coal at Southern Illinois University in my Congressional
121 district. Mr. Mead was the moderator. It was a forum called
122 by the Governor of Illinois and Senator Dick Durbin, as well
123 as members of the Congressional delegation, my colleagues,
124 David Phelps and John Shimkus, also attended. John is very
125 familiar with coal issues. He has been at the research center
126 at Southern Illinois University for many years and is very
127 familiar with clean coal technology.

128 Mr. Chairman, there is no question that clean coal
129 technology exists today that, in fact, significantly reduces
130 emissions of air pollutants. And there is new technology that
131 I believe will reduce emissions to a greater extent than we
132 ever imagined or anticipated. Over 50 percent of all
133 electricity generation comes from coal-powered plants in the
134 United States today. We have an abundance of coal in

28272

135 southwestern Illinois and other parts of this country and I
136 believe that we, in fact--any policy--energy policy coming
137 out of the White House or the Congress should, in fact,
138 include, to a large part, coal.

139 I applaud the Administration and Vice President Cheney,
140 as well as President Bush, for asking the Congress to put
141 additional money in fossil fuel research and development and
142 in clean coal technology. We, in fact, need to continue to do
143 research and development so that we can burn coal in the most
144 efficient and environmentally friendly manner. And with that,
145 Mr. Chairman, I will insert my statement in the record and
146 look forward to hearing from our witnesses. Thank you.

147 [The statement follows:]

148 ***** COMMITTEE INSERT *****

28273

149 Chairman BARTLETT. Thank you very much. I note that we
150 have been joined by two additional members of our Panel, Mr.
151 Smith and Ms. Biggert. You may make an opening statement if
152 you wish. Any formal statement will be included in the
153 record. Do you have comments before we welcome our witnesses?
154 Mr. Smith.

155 Mr. SMITH. Mr. Chairman, if I may, I was on the
156 Presidential Oil Policy Committee during the Arab Oil Embargo
157 back in the early '70s and it seems like again a revisiting
158 of some of the concerns of our increased dependency on
159 especially imported petroleum products. At that time, we were
160 importing about 35 percent of our petroleum energy needs.
161 Now, it is approaching 58 percent, I believe. And so, again,
162 it should be a heads up and a reminder that that kind of
163 dependency makes us more vulnerable and has a tremendous
164 impact on both the economy and the environment. So thank you
165 and the Ranking Member for holding this hearing. Thank you.

166 Chairman BARTLETT. Well, thank you very much. And I might
167 add that there is a national security implication too and we
168 are getting nearly 60 percent of oil from overseas. That is
169 too little recognized, I think. Without objection, the full
170 written testimony of all the witnesses will be entered into
171 the record. I would ask that you summarize your testimony in
172 5 minutes so we will have plenty of time for questions. And
173 let me assure you that any detail that you wish to expand on,

28274

174 | you will have ample opportunity to do that during the
175 | question and answer period. So without any further delay, Mr.
176 | Kripowicz, you may begin.

28275

177 STATEMENT OF ROBERT S. KRIPOWICZ, ACTING ASSISTANT SECRETARY
178 FOR FOSSIL ENERGY, U.S. DEPARTMENT OF ENERGY

179 Mr. KRIPOWICZ. Thank you, Mr. Chairman. Mr. Chairman, and
180 members of the Subcommittee, I appreciate the opportunity to
181 appear today with both panels and I want to commend the
182 Subcommittee for holding this hearing. I believe it is
183 important that periodically we step back from the day-to-day
184 conduct of our programs and ask the questions, are we making
185 progress, is that progress benefiting the American people,
186 and are we moving in the right direction?

187 I believe that for the Federal Fossil Energy Program, the
188 answer to each of those questions is an unequivocal yes. And
189 I appreciate the initiative, Mr. Chairman, you have taken in
190 holding this hearing to review the progress and benefits to
191 date and to discuss the course we should be setting for the
192 future.

193 In my formal statement I have used specific examples to
194 illustrate some of the technology advances that have resulted
195 from our partnerships with industry and academia. For each
196 items I have cited, there are many more that could be
197 referenced. In the interest of time, however, and to provide
198 adequate opportunity for my fellow panelists, I will
199 highlight only a few examples.

200 Let me begin with the Clean Coal Program. As you are
201 aware, the President has made clean coal technology one of

28276

202 the core elements of his National Energy Policy. Why clean
203 coal?

204 As the chart on page 2 of my statement illustrates, coal
205 supplies more than half the electricity consumed in this
206 country and America has more than two-and-a-half centuries of
207 recoverable coal. So at a time when a major issue confronting
208 this Nation is the future reliability of electricity, it
209 makes little sense to turn our back on this abundant
210 resource, especially if we can develop technology that
211 reduces, or perhaps one day soon eliminates, environmental
212 concerns over its use.

213 The Clean Coal Technology Program that began in the
214 mid-1980s and extended through five rounds of industry
215 competition laid the groundwork for such technology.
216 Thirty-eight projects ultimately were part of this program.
217 Several are still underway. Of the 30 or so that have been
218 completed, 22 have achieved some form of commercial success.

219 But more importantly, the Nation has benefited. When the
220 Clean Coal Program began, power generations had only a
221 limited number of choices for reducing most types of air
222 emissions, and what was available was generally expensive
223 and, in some cases, unreliable.

224 Today, largely because of the Clean Coal program and
225 related R&D, the menu of options has been greatly expanded.
226 Low-NOx burners, for example, were unproven when the Clean

28277

227 Coal Program began. Now, because of the experience gained in
228 several Clean Coal projects, three out of every four
229 coal-fired power plants in the U.S. are, or will soon be,
230 equipped with low-NOx burners.

231 Within the next 2 years, 30 percent will be outfitted
232 with selective catalytic reduction for even greater NOx
233 control. Again, the Clean Coal Technology Program helped
234 demonstrate the technology and lower costs.

235 In fact, before the Clean Coal Program, options for
236 controlling nitrogen oxides could cost as much as \$3,000 per
237 ton of NOx removed. Today, these costs have been cut in half
238 for selective catalytic reduction. And low-NOx burners can
239 reduce nitrogen oxide pollutants at costs of less than \$200
240 per ton.

241 Flue-gas scrubbers for sulfur dioxide, once expensive and
242 unreliable, now cost 1/3 of their 1970's costs. Not only are
243 they reliable, but the technology is now available to convert
244 the sulfur they take out as a pollutant into a product that
245 can be used to make wallboard, for example.

246 Again, Mr. Chairman, for a country that is increasingly
247 concerned about the costs of electricity, having technology
248 available that can reduce environmental compliance costs from
249 what is already our lowest cost fuel for power generation,
250 creates an enormous economic benefit.

251 Perhaps, equally important, the Clean Coal Program has

28278

252 | provided the basis for future benefits, benefits that the
253 | President's new clean coal initiative is intended to achieve.
254 | Coal gasification-based power generation is one of those new
255 | technologies. Because of the Clean Coal Program, we now have
256 | the first pioneering gasification combined cycle power plants
257 | operating commercially in the U.S. Their environmental
258 | performance approaches that of natural gas.

259 | Moreover, further improvements lie in the future. The use
260 | of fuel cells and advanced turbines, in combination with a
261 | coal gasifier, the ability to convert a portion of the coal
262 | gas into premium liquid fuels and chemicals, the potential to
263 | develop a coal-based energy system that lends itself to the
264 | future capture and sequestration of carbon dioxide--all of
265 | these are future pathways opened up by the clean coal
266 | gasification projects underway at Tampa, Florida and West
267 | Terre Haute, Indiana.

268 | In fact, Mr. Chairman, as I mention briefly in my
269 | prepared statement, we see the very real possibility of
270 | future coal-fired plants that are virtually pollution-free.
271 | That for all intents and purposes, remove environmental
272 | objections from the use of our most abundant fossil energy
273 | resource.

274 | Now, let me turn briefly to the subject of your second
275 | panel, which is petroleum and natural gas technology. Again,
276 | the long-term ability of our energy industry to find and

28279

277 produce the liquid and gaseous fuels on which our economy
278 depends, will largely be dictated by continuing advancements
279 in technology.

280 The Vice President's National Energy Policy Development
281 Group recognized this and recommended efforts to continue
282 fostering improvements in oil and gas technology. Again, in
283 this area, I believe our track record is good.

284 One of the major advancements in oil and gas technology
285 in the last 20 years has been the polycrystalline diamond
286 drill bit, and we are proud of the fact that one of our
287 national labs solved the bonding problem that made such bits
288 possible. Today, we are working with national laboratories,
289 universities, and the industry to make the next leap forward
290 in drill bit technology. For example, using special microwave
291 techniques to develop a bit that will last longer and drill
292 deeper and faster.

293 I have described new seismic technologies that were
294 supported in our program, like four-dimensional seismic
295 technology that adds time to the imaging equation, and new
296 imaging systems that work at the bottom of an oil or gas well
297 and whose resolution is ten times more precise than other
298 technology.

299 These are technologies that offer benefits across the
300 board for all types of companies drilling in more complex
301 environments. But in recent years, the nature of our domestic

28280

302 | oil industry has changed and so has the focus of much of our
303 | research.

304 | Today, smaller independent companies are rapidly becoming
305 | the dominant oil and gas producers in the United States.
306 | Independent producers account for 40 percent of the crude oil
307 | produced in the United States and 50 percent of the oil
308 | produced in the lower 48. They produce 2/3 of our Nation's
309 | natural gas and they account for 85 percent of all the new
310 | wells drilled in the United States.

311 | Now, very few of these companies conduct significant
312 | research by themselves. Traditionally, most have relied on
313 | technology to trickle down from the majors, but with more and
314 | more of the larger companies moving to more lucrative
315 | prospects overseas, the flow of new technology has slowed.

316 | Our program attempts to fill the gap, working with
317 | independent producers to determine whether promising, but
318 | high-risk approaches work, and, if they do, requiring the
319 | producer and others in the industry to undertake an
320 | aggressive technology transfer effort.

321 | I have cited two examples in my testimony of partnership
322 | projects that have worked. One of the projects involved a
323 | complete oil field workover using new technology to locate
324 | and produce oil that had been previously abandoned. In the
325 | last 5 years, that project, near Bakersfield, California, has
326 | produced more than 1 million barrels of oil that, otherwise,

28281

327 would have remained in the ground. More importantly, it
328 stimulated 100 new privately funded wells in the surrounding
329 area.

330 That was a full cost-shared field test. Often, however,
331 we find that small grants, targeted at very specific
332 production problems, can return major benefits. A small
333 producer working in a field in Los Angeles wanted to try a
334 new type of acid treatment to remove downhole deposits that
335 were on the verge of putting many of his wells out of
336 operation. He applied for a DOE grant to help cover the risks
337 of this unproven technique and was selected for a
338 cost-sharing project in a DOE competition. The treatment has
339 exceeded expectations. Oil flow not only has been restored,
340 but is now four times the previous rate. And the producer is
341 now holding workshops and technical meetings to describe the
342 new acid treatment process to other producers.

343 These, I believe, Mr. Chairman, are the keys to
344 successful federal research programs. First, partner with
345 industry to support the new ideas that otherwise would be too
346 risk to pursue. Secondly, wherever possible, support new
347 ideas through cost-sharing and where industry must compete
348 with their peers for federal support. And third, ensure that
349 there is a built-in technology transfer, where the
350 involvement of industry and the financial commitment that
351 industry makes provide natural conduits for successful

28282

352 technologies to be used commercially once the federal project
353 is over.

354 Our goal is to foster this type of research program in
355 the Fossil Energy Program at the Energy Department. With
356 fossil fuels supplying 85 percent of the Nation's energy, we
357 believe that such a program is a necessary component of a
358 more energy secure, economically strong, and environmentally
359 healthy future. Thank you for the opportunity to testify.

Chairman BARTLETT. Thank you very much. Mr. Yamagata.

28285

365 STATEMENT OF BEN YAMAGATA, EXECUTIVE DIRECTOR, COAL
366 UTILIZATION RESEARCH COUNCIL (CURC), WASHINGTON, D.C.

367 Mr. YAMAGATA. --public and private partnerships. I
368 pretend to be a technologist, but that is clear evidence that
369 that is not the case. In any case, we have submitted a
370 written statement. In that written submittal, may I commend
371 to you, Mr. Chairman, and to members of the Subcommittee, for
372 your review, there is a detailed description and discussion
373 of our organization's coal technology road map which has been
374 an attempt by our membership to outline the technology needs
375 for coal that at least we believe will best ensure the
376 long-term economic and environmentally acceptable use of this
377 very plentiful domestic and secure energy resource.

378 May I also commend to your viewing an electronic version
379 of a document prepared by the National Mining Association
380 that describes the overall benefits of coal and the value of
381 the government and industry's Clean Coal Technology Program.
382 Within the time allotted to me, Mr. Chairman, I would like to
383 use this handout that I have prepared for the Committee's
384 perusal, and to discuss with you very generally the elements
385 of the CURC technology road map and then to suggest to you
386 that successful pursuit of this road map or any other like
387 technology road map will require a commitment, a commitment
388 on the part of industry and government, a commitment that
389 must form--be formed by adequate amounts of time and adequate
