

Beach Bums

These 70 beaches meet the following criteria (beaches that reported an attendance of less than 100 on a summer holiday are not included):

1. They are not monitored and have no program to regularly notify the public when health standards are exceeded;
2. They don't use EPA recommended criteria (including both the geometric mean and single sample); and
3. They have known source(s) of pollution in the vicinity of the beach or that might affect the beach.

NRDC also named Louisiana and Oregon Beach Bums because neither has a regular monitoring or public-notification program.
