September 10, 2009

Dear Senator/Representative:

Our 160 national, regional, state and local organizations, including conservation, faith, sportsmen and community organizations, urge you to co-sponsor S. 1215/ H.R. 2766, the **Fracturing Responsibility and Awareness of Chemicals (FRAC) Act**. This important legislation would repeal an exemption in the Safe Drinking Water Act (SDWA) for an oil and gas technique called hydraulic fracturing. It would also require public disclosure of the chemicals used in hydraulic fracturing fluids.

Oil and gas production is present in over 30 states, and a consistent national standard is needed for this practice. Hydraulic fracturing involves the injection of fluids into oil or gas wells at very high pressure in order to crack open the underground formation and allow oil or gas to flow out more easily. These fluids often contain toxic chemicals, some of which remain underground. The pressure places stress on the oil or gas well and can lead to unpredictable consequences. Our organizations represent communities across the country that are concerned about drinking water contamination linked to hydraulic fracturing operations. Reports of drinking water contamination come from Colorado, Texas, Arkansas, Ohio, Pennsylvania, Alabama and Wyoming.

While states regulate oil and gas production, state rules vary widely and a federal floor is needed. As stated in a study by the Hastings College of the Law, “many of the state regulatory schemes date from earlier waves of resource extraction, and have not kept pace with changed technologies, nor with a deepening concern for public health and the environment.” For example, a recent report issued by the Ground Water Protection Council found that some states do not require a well’s surface casing to be set through the deepest ground water zone. Protection of drinking water is a national concern that should not be left to a patchwork of state regulations

In 2005, Congress exempted hydraulic fracturing from the SDWA to the benefit of Halliburton and other oil and gas companies. It is time to close the Halliburton Loophole and hold the oil and gas production industry to the same standards as any other industry.

Most states have primacy for regulating underground injection; under this legislation EPA could allow states considerable flexibility to tailor their rules to local conditions. All Americans deserve to have their drinking water source protected from endangerment under federal law.

The right balance needs to be established between oil and gas development and protection of our precious and finite natural resources. Instead of that balance, however, provisions of some of our most critical federal environmental laws have exemptions for oil and gas production. In addition to the Safe Drinking Water Act, there are loopholes in the Clean Air Act, Clean Water Act, and Resource Conservation and Recovery Act. These loopholes should be closed, starting with the Halliburton Loophole.

We hope you will co-sponsor this sensible and important legislation to close the Halliburton Loophole in the Safe Drinking Water Act.

Signed,
