Sent via Email

Dear Mr. Harris,

Below is the City's response to the EPA action item regarding service line material update. As of June 4, 2021, there have been 27,051 service lines checked with 10,024 replacements. We have approximately 2,130 lines left to identify or replace, this number also includes the non-responders. If we assume 20% of the remaining 2,130 lines to be lead and need replacement, we have approximately 426 lead service lines remaining in the system. We continue to work on phase VI. Our current number of active service lines is 28,825, so some of the lines we have replaced/checked are inactive, as are probably some of the 2,130 left to identify. We also currently have 601 declinations.

Sincerely,

Michael J. Brown
Director of Public Works
