Survey Among 403 Active Voters in
Texas' 29th CD
June 5 - 8, 2007

Voters overwhelmingly agree we should start now to reduce global warming pollution

Which one of the following two statements do you agree with more? [Rotate the order of statements]
1) We should start now to gradually reduce global warming pollution, with bigger declines in the future, Or
2) We should wait to set pollution limits until cleaner energy technologies are available.

Q6

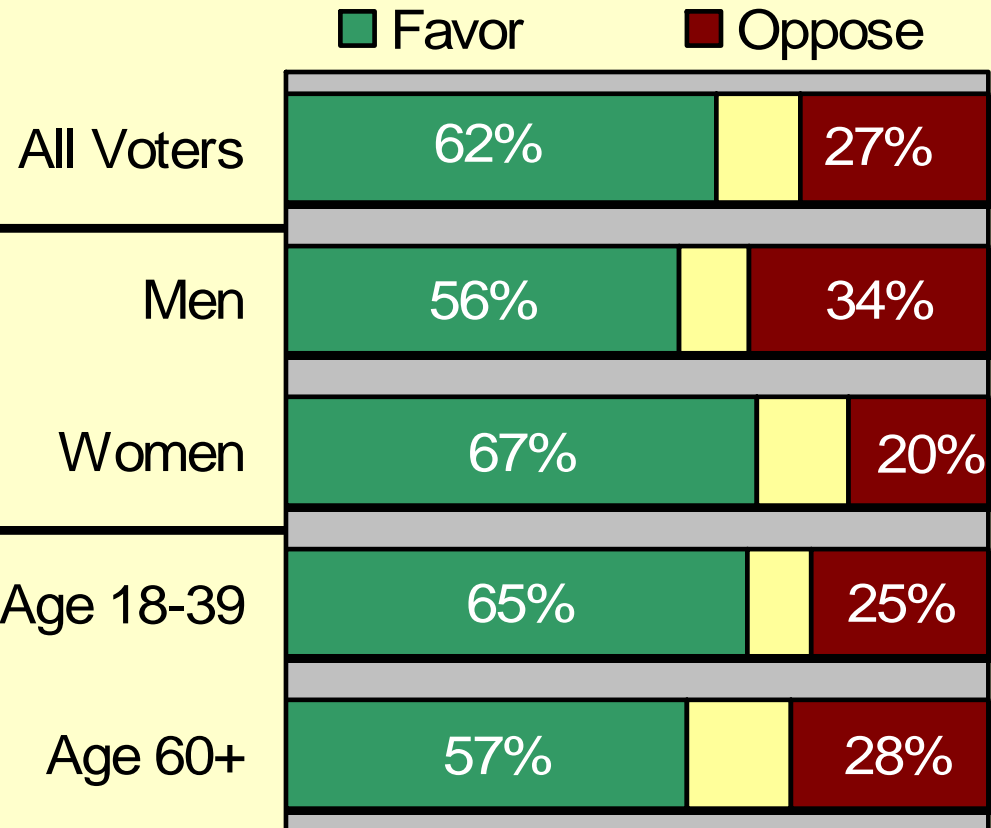

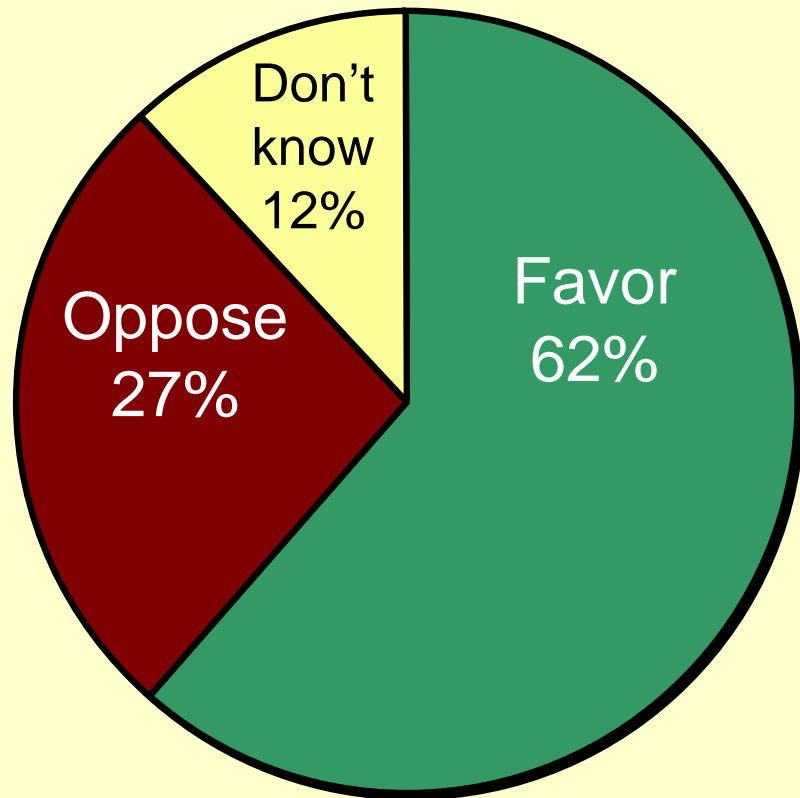

**HARSTAD STRATEGIC

A 62% majority of voters favor a carbon cap and trade proposal to reduce global warming pollution in the U.S.

As you probably already know, burning fossil fuels such as coal, oil, and natural gas results in carbon emissions that scientists believe contribute to global warming. I would like to describe a proposal — called a carbon cap — that will reduce global warming pollution in the U.S. The U.S. Government would require reductions of global warming pollution by placing a mandatory limit on carbon dioxide and other gasses from power plants, refineries, and heavy industry. It would also create a market to allow corporations that burn fossil fuels to achieve the lowest cost emission reductions by buying and selling pollution permits.

Based on this information, do you favor or oppose this proposal to reduce global warming pollution in the U.S.?
