Potential Exposure-Related Human Health Effects of Oil and Gas Development:
Literature Review Appendices

Appendix 1: Volatile Organic Chemicals (VOC) .......................................p. 3
Appendix 2: Diesel Exhaust .................................................................p. 10
Appendix 3: Nitrogen Oxides (NOx), Sulfuric Oxides (SOx),
               Ozone, Particulate Matter .............................................p. 14
Appendix 4: Polycyclic Aromatic Hydrocarbons (PAH) .......................p. 50
Appendix 5: Metals .........................................................................p. 53
Appendix 6: Hydrogen Sulfide (H2S) ...............................................p. 59
Appendix 7: Fossil Fuels .................................................................p. 61
Appendix 8: Noise ........................................................................p. 63
Appendix 9: Light ..........................................................................p. 65
Appendix 10: Occupational Injuries ................................................p. 66
Appendix 11: Social / Psychological .................................................p. 67
