

THE ROAD TO BETTER TRANSPORTATION

Pollution from the diesel-fueled freight industry affects nearly everyone.

Rising freight volumes threaten the health of our communities, worsening air quality and contributing to climate change.

Nearly
45 Million
Americans live less
than 300 feet from
a highway

More than
13 Million
Americans live in
the vicinity of marine
ports and rail yards

WE CAN REDUCE AIR POLLUTION & CARBON EMISSIONS

from trucks, trains, ships, and equipment with:

CLEANER NEW ENGINES

are more efficient than
older models.

ALTERNATIVES

include using cleaner fuels
and more efficient engines to
reduce pollution. Trains can
move roughly three times more
goods than trucks, for every
gallon of fuel.

ELECTRIC POWER

for trucks, trains, equipment
and ships while at dock.
