Who We Are:
NRDC’s Rewrite the Future is an initiative to support Hollywood as it takes on the climate crisis. Rewrite the Future leverages the expertise of NRDC, one of the world’s leading environmental advocacy organizations, to help film and television creators represent our climate-altered world and the path toward a better future.

What We Do:
- Consult on film and TV projects, bringing the expertise of NRDC’s 700+ environmental professionals to content across genres;
- Host workshops and presentations for writers and producers;
- Encourage new voices through NRDC’s Climate Storytelling Fellowship, in collaboration with the Black List, the Redford Center and CAA Foundation;
- Lead public discussions about climate representation;
- Advise entertainment companies on integrating climate content into their sustainability strategies.

Why It Matters:
Studies show that audiences across demographics want to see climate change dramatized onscreen. And yet, less than 1% of film and television scripts in recent years even mention climate, according to a study by USC and Good Energy. Only 2.8% mention climate-adjacent terms like solar panels, electric cars, etc.

Questions To Consider for Your Project:
- How could your story reflect our climate-altered world?
- How does climate change impact the place(s) in which the story is set?
- Could you incorporate climate change as context for the story? Or show your characters navigating their changing relationship with nature?
- Could a climate obstacle provide an interesting narrative twist?
- Could climate change heighten the stakes for your characters?
- How does it impact your characters physically and economically? Does it influence their basic life decisions?
- How does climate change impact your characters psychologically, e.g. are they in denial or experiencing anxiety – and how does this influence their actions?
- Could the story reflect environmental racism or the unequal impacts of climate change?
- Could a climate-centered career or backstory help flesh out a primary or secondary character?
- Are there opportunities to depict characters working towards climate solutions, large or small?
- If the story depicts disaster/dystopia, does it get stuck there, or show a path toward a better world?
- Does the story perpetuate harmful archetypes or myths, e.g. that climate change is too big to fix?
- Does the story appropriately attribute responsibility for climate change?
- How will your story leave audiences feeling about climate change?
- Are there opportunities for sustainable onscreen behaviors (see tipsheet below)?

Resources:
- Rewrite the Future: Learn more about Rewrite the Future and watch our Sundance panels from 2021, 2022 & 2023.
- Sustainability Onscreen Tipsheet: This tipsheet offers a wide array of options for creators and producers interested in representing climate and sustainability onscreen.
- Green Production Guide Creative Resources: The PGA and Sustainable Production Alliance have a variety of creative tools available on the Green Production Guide site.
- ALBERT Editorial Toolkit: The team at BAFTA’s albert program has put together a comprehensive creative guide on how to incorporate climate and environmental stories into content.
