

Southwest Florida Water Management District (SWFWMD)

The agency with jurisdiction over water loss reporting is the Southwest Florida Water Management District (SWFWMD).

Complying with the SWFWMD [Southern Water Use Caution Areas \(WUCA\)](#) Public Supply Special Conditions, all public supply permittees with permits for 100,000 gallons per day or more located in are required to perform periodic water audits.

While SWMD requires periodic water auditing, other districts encourage utilities to conduct audit as a normal conservation and efficiency business practice.
